

## Training Highlights

Get complete training from one source:  
One stop shop Training Academy

### Pilot Training

Training Academy flight instructors have thousands of hours of real-life experience on Eurocopter helicopters.

### Pilot Training

Flight Training Courses are tailored to customers' needs – complete training for usage of all standard and optional equipment.

### Pilot Training

New full flight simulator for EC 135 P2+ (full-motion flight training device).

### Aircraft Technician Training

Practical Training for all helicopters (BO105, BK117, EC145 and EC135) on fully equipped maintenance trainers similar to series helicopter.

### Aircraft Technician Training

Eurocopter Training Academy is one of the most modern training centres in the world. Nevertheless any training course can be carried out at your facility.

### Aircraft Technician Training

Type training is adapted and tailored to your demands (additional training of nearly all available optional equipment).

### Specialized Training

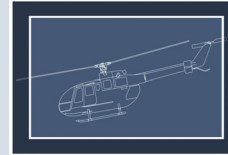

Exclusive training courses for your planning and operational staff increase the efficiency of your operation.

## EUROCOPTER Training Academy

Come train with EUROCOPTER and enjoy the confidence that comes from working with a flexible, customer-focused training center that is committed to your success.

## One Goal: Improve Flight Safety

### Dear Customers,

The Eurocopter Training Academy is the world's leading training facility for pilots and technicians.

For more than 20 years we have now been offering extensive training. Our goal is to stand up to your expectation and to contribute decisively to flight safety.

Improving permanently our training means we offer a combination of interactive training (e.g. computer based training), cooperative learning based on all-embracing training manuals and practical instruction on the latest technology.

Our courses offered are designed to cover the full range of your training needs. Nevertheless, we can also provide your organisation with the most effective training solution tailored to your demand.

Eurocopter Training Academy arranges a complete training program for your staff based on a training need analysis.

The high quality of our training courses is assured by a very strict internal quality system and regular audits by national authorities and EASA.

We are extremely proud of our role in providing world class helicopter training.

The Eurocopter Training Academy is looking forward to welcoming you.

Best regards,

**Charles Hebeka**

Accountable Manager  
Training Academy

## Eurocopter Training Academy

### Flight Training Organisation (FTO)

The FTO is approved according to JAR-FCL 2.

Our pilots have performed every possible helicopter mission worldwide.

They are flight instructors with **thousands of flight hours of real-life experience** keeping a close

relationship with Eurocopter's design department, test flight pilots and the maintenance staff. They stay in touch with the latest developments.

Simulations, computer based training (CBT), avionic trainers and flight simulators complete the training program.

### Maintenance Training Organisation (MTO)

The MTO is approved according to EASA PART 147.

As experts in their respective fields, our technical instructors work closely with the engineering departments and make the success of each student a priority.

For the **theoretical training** the classrooms are equipped with the latest electronic media. Students have access to all aircraft parts and documents.

Simulations and computer based training (CBT) complete the diversified theoretical instruction which leaves no question unanswered.

For the **practical training** we offer for each type a fully equipped helicopter which is similar to a series helicopter.

All special tools (incl. test equipment) are available and can be demonstrated.

The practical training is adapted to your real needs (first inspections, inspections according master service manual as well as difficult tasks).

## Courses Offered

### Pilot Training

- Type Rating Course VFR
- Ground Run & Functional Check Flight
- Refresher Course
- Type Rating Instructor and Type Extension
- CAT.A Training
- Type Rating IR
- Instrument Rating
- Special Training Courses
- GPS Training
- NVG Training
- FLIR - Operator Training
- IFR Transition
- Synthetic Flight Instructor Training
- Emergency Refresher Training

### Aircraft Technician Training

- B1 Type Training - airframe
- B2 Type Training - electrical system/avionics
- Engine Training
- B1 Practical Training - airframe
- B2 Practical Training - electrical system/avionics
- B1 Conversion Courses - airframe
- B2 Conversion Courses - electr. system/avionics
- System Familiarization - cat.C
- Refresher Course
- Inspection Course
- Rotor Head Inspection Course
- External Hoist Operation
- Rotor Blade Repair
- Optional Avionic Equipment (ATC, Weather Radar, Navigation, Communication, Intercom and others)
- Air Conditioning System
- FLIR - Maintenance Training
- Electric Courses
- Cable Harness Repair Course
- Sheet Metal Repair Course
- Composite Repair Course

### Specialized Training

- Guidelines and Documentation
- Logistics
